Product	Active Ingredient	Formulations	Roundworms						Tapeworms			Heartworm	Ectoparasites			
			Toxicara Canis	Toxascaris	Trichuris	Ancylostoma	Uncinaria	Angiostrongylus	Dipylidium	Echinococcus	Taenia sp	Dirofilariasis	Fleas	Ticks	Mites	Lice
Capstar	nitenpyram	tablet											*			
Droncit	praziquantel	tablet								*	*	*				

## WildCamping Datasheet updated July 2017 by WildThingsKev.

The table overleaf is an exact reproduction of a printout from a webpage on [www.rpsgb.org.uk](http://www.rpsgb.org.uk) which is no longer available (updated by myself in May 2014 to include Vectra 3D).

---

Personal Notes - Please double-check, and make your own decision

### Synthetic Pyrethroids.

You cannot use permethrin (Advantix/Vectra 3D) and deltamethrin (Scalibor) together as all are synthetic pyrethroids. Both are toxic to cats. You can use Frontline with the Scalibor collar.

Synthetic Pyrethroids are effective in repelling mosquitoes, ticks and sandflies from biting and feeding

#### Mosquitoes

Risk transmit Heartworm /Lungworm

#### Sandflies

Risk transmit Leishmaniasis (Canileish vaccine now available)

#### Ticks

Risk transmit Babesiosis and Ehrlichiosis

**Praziquantel** MUST be used to treat for the Echinococcus tapeworm prior to return to UK and recorded by a vet in the dogs passport 1-5 days before crossing.

Table overleaf: Source NOAH Compendium 2009 (National Office of Animal Health)

List is not exhaustive

A number of POM(V) products are under review for a possible reclassification to NFA(VPS). Please refer to VMD for latest information

#### Veterinary Medicine Classifications

- AVM-GSL medicines There are no legal restrictions in the VMR for the retail supply of veterinary medicines classified as AVM-GSL ("over the counter" medicine) but a responsible approach to the supply of these medicines is still expected.
- POM-V medicines A Veterinary Medicinal Product (VMP) that has been classified as a POM-V may only be supplied to the client once it has been prescribed by a veterinary surgeon following a clinical assessment of an animal, or group of animals, under the veterinary surgeon's care.
- POM-VPS A veterinary medicines classified as POM-VPS may be prescribed by any Registered Qualified Person (RQP - a veterinarian, a pharmacist or an appropriately qualified SQP ([Suitably Qualified Person](#))). A clinical assessment of the animal(s) is not required when prescribing this category of veterinary medicine and the animal does not have to be seen by the prescriber. However sufficient information about the animal and the way it is kept must be known to the prescriber in order to prescribe and supply appropriately.
- NFA-VPS A veterinary medicine classified as NFA-VPS may be supplied by an RQP (a veterinarian, a pharmacist or an appropriately qualified SQP) provided the requirements for supply are met. These medicines do not require a prescription
