Product Code GI-FP-005

Manufacturer [GAS IT](#)

Condition New

Weight 0.5Kg

This is a UK, high quality Angled Removable bayonet fill point certified to R67 regulations.

Designed to be mounted directly on the vehicle bodywork, which makes a simple and semi hidden fillpoint, and when you need to fill the gas tank you simply lift the Black fillpoint lid and screw the supplied bayonet fillpoint into it. It can be also be used with the 70mm recessed fill box or can be mounted on a tow bar or under a vehicle using the Angled Fill bracket here in our shop.

Designed to be used with our SAE Fill Hoses - E67.01 Specification hoses which are available in different lengths in our shop.

Requires a 29mm hole cutter to fix it to the vehicle which we list in our tools section or from the drop down side menu.

*This fillpoint is machined to have the required 45 degree shaped faces to exactly match the sealing faces on LPG Fill hoses, Fill points & Fill connections on all certified refillable gas*
